## Technical Skills

- HTML
- CSS
- JavaScript
- jQuery
- CSS Frameworks:
  - Materialize
  - Bootstrap
  - Semantic UI

## Projects

### Doctor Magnificent's Fortunes – Contributor

- A simple app that gives the user a tarot reading an horoscope using a tarot card API and a horoscope API. The project was made with HTML, CSS, and JavaScript. My role was to use Materialize and custom CSS to make the page look attractive and easy to navigate.

### Random Password Generator

- A one-page app that accepts user input and generates a random password that they can use anywhere a strong password is needed. The page uses JavaScript to generate the password, which can include lower-case letters, upper-case letters, numbers, and web-friendly symbols

### Weather Dashboard

- A weather dashboard that uses the Openweather API to get weather anywhere in the world based on either a city/state search or zip code. The dashboard also shows the conditions, temperatures, and humidity of the next five days of a searched city. The site uses local storage to save recent searches and load the last search when the page is opened.
